We want to know if playing games on computers is the same as playing with real toys.

Come help us do science!

Part 1. Come play a computer game and answer riddles with us.

Part 2. Play games with different toys in our playroom

The study has two parts, so you will come in two times. Each time, you will be with us for about 45 minutes.

We are looking for people 3 years to 7 years old to participate.
Parents will complete questionnaires while children participate in the games.
Families will be compensated $15 for each part!

The sessions would take place in our playroom at Columbia University and comply with current social distancing regulations. All researchers are fully vaccinated and will wear PPE.
